

**WISHING YOU
AND YOURS
A GREAT 2021!**

***Rhea Jezer
& the Energy21 Team***

What we look forward to in 2021:

- This year we have the opportunity to set the country on the path to a carbon-neutral economy by 2050 and zero-carbon electricity by 2035
- This year we will enact the groundbreaking Climate Plans, both state and federal, by restoring and expanding investments in clean energy technologies that will power our future and put people back to work as we rebuild an economy ravaged by COVID-19
- This year we will reverse the most egregious attacks on the vital safeguards that protect public health and the environment
- This year we will work toward environmental equity for low-income communities and communities of color
- This year we will repair and advance our standing on the world stage — in particular, by re-entering the Paris climate agreement

SAVE THE DATE:

**17th Annual
Symposium on Energy in the 21st Century
April 16, 2021**

**Electric & Carbon Free Transportation
Solar Inclusion in Grid
Climate Justice**

ABOUT THE SYMPOSIUM ON ENERGY in the 21st Century

This is our 17h year! The award winning Symposium has been cited as one of the most important conferences on energy policy in New York and the Northeast. Attendees come from New York as well as many other Northeastern states. The gathering is in an informal atmosphere that creates a particularly dynamic and rich environment for all traditional partners and the public at large explore critical energy issues with experts. There are no breakout sessions and no tabling, just interesting cutting edge presentations and discussions. This year we were virtual but hope to return to an in person event as soon as we can.

Attendees at the event are a diverse group. They include major business, environmental, labor leaders, academics, architects, engineers, builders, laborers, elected officials, municipal planners, governmental agency staff, institutional planners, architects, lawyers, farmers, college and graduate students as well as many interested citizens.

The mission of the Symposium is to present a comprehensive understanding of the possibilities available for us to confront the problems and issues which are creating global warming, and to gain insights into possible solutions. This Symposium does not endorse any products, technology, individuals or positions.
